<b>9.</b>	<b>Date of commencement of the Project:</b> 04/11/2024
<b>10.</b>	<b>Probable date of completion of the project:</b> 30/05/2025
<b>11.</b>	<b>Scope / Objectives of the project:</b> <ul style="list-style-type: none"> <li>➤ To design a system that continuously monitors water usage in real-time.</li> <li>➤ To provide precise, automated tracing of water usage in real-time.</li> <li>➤ To determine the water quality of precised container for the usage of water.</li> <li>➤ To provide a web dashboard that is easy for users to navigate, showing detailed usage statistics.</li> </ul>
<b>12.</b>	<b>Methodology:</b> The Smart Wireless Water Meter system uses sensors to monitor flow rates, tank levels, and water quality, sending real-time data to a microcontroller and a web database via IoT protocols. Accessible through ThingSpeak, users can view live data, receive alerts, and track trends. Automated controls manage pumps based on tank levels, while contamination sensors ensure water safety, optimizing water management and resource conservation.

### Block diagram

The diagram shows a Smart Water Meter System using an ESP32. It includes sensors like FS400 for flow rate, Ultrasonic for tank level, and TDS for water quality. A Relay controls the pump, and data is sent to a Cloud Server for remote monitoring.

## Flow diagram

This flowchart outlines an automated water management system. It controls water flow based on container capacity, water quality, and threshold levels. The system starts by filling a container, checks purity, and directs water accordingly while displaying data on a dashboard.

## Software

### ThingSpeak IoT

ThingSpeak is an open-source Internet of Things (IoT) platform for collecting, analyzing, and visualizing sensor data. It allows users to send and receive data from devices, store it in the cloud, and display it on custom dashboards. ThingSpeak supports integration with MATLAB for advanced data analysis and visualization.

**13. Expected Outcome of the project:**

The goal of the suggested system is to completely transform water management by providing a scalable and intuitive solution to important problems. It promotes long-term environmental goals, reduces waste, and improves water usage efficiency by incorporating cutting-edge technologies. The system uses real-time monitoring to give users the most recent information, facilitating proactive reactions to possible problems and well-informed decision-making. Operations are streamlined by automation features, which decrease manual involvement and increase overall dependability. The platform also guarantees smooth data accessibility, giving stakeholders practical insights to maximize consumption trends and uphold safe water usage procedures. In addition to encouraging environmental preservation, this all-encompassing strategy helps to build a more intelligent and sustainable future for the management of water resources.
